PROFESSIONAL SUMMARY

Computer Science graduate with a strong passion for Android development and hands-on proficiency in Kotlin and Java. Backed by a solid foundation in systems programming (C/C++), algorithm design, and computer graphics— knowledge that translates directly into building efficient, responsive mobile applications. Well-versed in software engineering fundamentals including OOP, MVC architecture, REST APIs, and database design, complemented by practical experience across full-stack technologies (PHP, React, MySQL). Eager to bring a detail-oriented, performance-conscious approach to an internship or entry-level role in Android development, combining strong technical fundamentals with a genuine drive to build polished, high-quality mobile experiences.

PROJECTS

Al Lijan Al Fahissa — Correctors Management System · Lebanese University 2026

Stack: PHP · MySQL · HTML5 · CSS3 · JavaScript

- Designed and built a full administrative web application to manage corrector data for an active Lebanese University department, deployed in a live institutional environment.
- Engineered a custom MySQL schema to handle complex relational data, ensuring data integrity across multiple corrector records.
- Implemented automated summary report generation using PHP, reducing manual administrative overhead and eliminating data entry errors.
- Applied secure data-handling practices including input validation and query parameterization to prevent SQL injection vulnerabilities.

AI Puzzle Solver (Wordy Bot) · Lebanese University 2026

Stack: Python

- Built AI solvers for N-Queens and Knight's Tour problems using backtracking and Warnsdorff's heuristic rule, achieving efficient solutions for boards up to 20×20.
- Developed Wordy Bot, a Wordle-solving agent that narrows guesses using constraint elimination logic, consistently solving puzzles in under 4 attempts.
- Applied algorithmic thinking and complexity analysis to optimize search trees and minimize redundant state evaluations.

2D Train Animation — Real-Time Rendering Engine · Lebanese University 2026

Stack: C++ · OpenGL · GLUT

- Engineered a real-time 2D animation engine using OpenGL and GLUT, implementing geometric transformations (translation, rotation, scaling) for a fully dynamic train simulation.
- Built a custom rendering pipeline with primitive composition and coordinate-space management, demonstrating low-level graphics programming competence rare at undergraduate level.

EDUCATION

B.Sc. in Computer Science · Lebanese University – Faculty of Science, Fanar 2023 – 2026

- Coursework: Algorithms, Data Structures, Databases, Operating Systems, Software Engineering, Computer Graphics.

M.Sc. in Computer Science · Lebanese University – Faculty of Science, Fanar 2026 – sep 2028

- Coursework: Machine Learning, Deep Learning, Advanced Web Development, Cloud Computing

Python for Everybody Specialization · University of Michigan via Coursera 2024 – 2025

- Completed 4-course series: Python Basics, Data Structures, Accessing Web Data, Databases with Python. Covers file I/O, REST APIs and OOP patterns.

LEADERSHIP & VOLUNTEERING

Scout Member· Les Scouts du Liban 2016 – Present

- 10+ years of continuous involvement in a structured organization, demonstrating long-term commitment and reliability — qualities directly applicable in agile team environments.
- Developed skills in team coordination, conflict resolution, event planning, and leading groups of 10-15 participants through structured programs.

TECHNICAL SKILLS

Languages: C, C++, C#, Java, Python, PHP, Kotlin, JavaScript, TypeScript, SQL, XML
Frontend: React, HTML5, CSS3, JavaScript (ES6+), TypeScript
Android Development: Java, Kotlin
Backend: PHP, ASP.NET Core, MySQL, SQL schema design
Tools & Workflow: Git, GitHub, Jira, Confluence, OpenGL, GLUT
Concepts: REST APIs, MVC architecture, database normalization, backtracking algorithms, OOP
